E-PAPER SIGNAGE

e-paper signage

Shapes the future of signage

Place & Play is the only all-in-one digital signage device combining mount, display and player. A cable-free electronic paper display with full CMS integration and up to a year of battery autonomy. Just as effortless to use as the name suggests, Place & Play is easily installed on all indoor surfaces and is usable straight out of the box, and the best part: there isn't a single wire in sight.

Place & Play can be used **for many applications** such as: Bus stop, Railway stations, Airports, Corporates, Educational institutes, Healthcare, Hotels, Malls, Banks, Government agencies, Service facilities and many others. Place & Play connects via Wi-Fi and promises to be usable straight out of the board. The ePaper display is easily readable, emits no light pollution and features the "ultimate" in image optimization and refresh. In addition, it runs on a fraction (1% to be exact) of the power required by a similar LCD solution. It is also installable anywhere, even on glass partitions.

The image shows a digital display with a white background and a grey border. It displays flight departure information for Terminal 2 at Barcelona Airport. The text is in a clean, sans-serif font. At the top left is an airplane icon. The title "Sortides Departures Salidas" is on the left, and "Terminal 2 BARCELONA AIRPORT EL PRAT" is on the right. Below is a table with columns for time, destination, flight number, aircraft, departure time, and gate. The table contains 9 rows of data.

VISIONECT

Urban

The first Place & Play bus stop information board

No drilling, No Power/Internet Cables

Meet the Urban. The only place & play digital bus stop information board. Zero drilling and no cables! The Urban is a full-stack solution to quickly validate and deploy a city-wide communications system without expensive infrastructure investments. Fully customizable for larger deployments.

The Urban is installed with just a few bolts and is GFS ready, for real-time arrivals and instant service notices even in the most demanding locations. Solar-powered, with paperlike readability.

REAL-TIME INFORMATION

GFS real-time feeds. Arrival information, bus capacity, site-specific service notices and emergency messages.

DAYLIGHT READABLE

The legibility of paper on a digital screen. Daylight readable, front illumination for visibility in the dark.

OUTDOOR READY

A robust dust-tight and waterproof casing. Impact detection to prevent tampering. UV protection.

EASY TO INSTALL AND USE

Installable with just a few bolts. Fully customizable via 4G. All locations at once, with just one click.

RUNNING ON SUNSHINE

Powered by a solar cell. Off-the-grid, completely independent from the city's electrical network.

FULLY CUSTOMIZABLE

For larger deployments. Time-specific ads, additional colors, branding. Change battery, solar cell or frontlight.

Solar or Battery Powered

Transparent LED Screens

Where to use

In-Store

Store's glass window

Structure glass façade & Panoramic elevator

Transparent LED Screen is a type of LED display screen that is clear like a glass (60%-85% transparency) and has functions of an LED. It enables the viewers to see whatever is shown on the glass along with providing a complete coverage of its background as well. Since it enables audience to see what is happening behind the screen, it is also referred to as a see-through screen.

Revolutionary Technology

2mm thickness Transparent LED FILM SCREEN

LED FILM SCREEN

Video

Catalogue

Transparent LED film is a high-end revolutionary self-adhesive thin film easily attached to any glass surface transforming a normal window or building façade into an eye-catching display quickly and with minimum efforts.

The ultra-light-weight and 1,2mm -2mm thickness film requires no complicated construction or structure, flexible and can be deployed on any curved glass or window.

MAGICVIU supplies a wide range of transparent self-adhesive LED film from 6,5mm - 60mm pixel pitch with different transparencies ranging from 50%-95% depends on application and desired pixel pitch.

If you have a glass window or façade that is over 60 square meter and want your brand or message brightly noticed day or night, MAGICVIU transparent LED film is the perfect solution.

Rear & Front Projection Films

Rear or front projection film is a paper-thin projection surface with integrated application adhesive for installation on glass and acrylic surfaces. All Screen Solutions rear or front projection films are designed to be projected onto with any projector type other technology that may be used as a projection source. One of many **advantages of rear projection** is that you can stand in front of the **screen** without blocking the light from the **projector** and casting a shadow on the **screen**. This gives more options for stage and room layouts and provides a more professional presentation setup. Rear projection film has a better performance in high ambient light environments than front projection screen

MAGICVIU

Purely Projection

Real sky at real time for your 1st class lounge

Using ultra short projection technology we are able to fit the screen into a very low ceiling void with only 450mm between the screen and the slab above.

The projection is extremely lifelike, we can also add a 4K camera mounted on the roof of the building to show the sky outside in real time as well as 4K media player content, we can go too far and add IP cameras in other areas of Saudi Arabia and show the sky from other locations on the skylight.

The benefits of projection is that pricing is cheaper than led and the image quality is very good. Also the mounting is simpler. With LED laser light sources you can now install projection without worrying about lamps or filters needing to be changed.
